STANDARDISATION OF CHECK FORMS

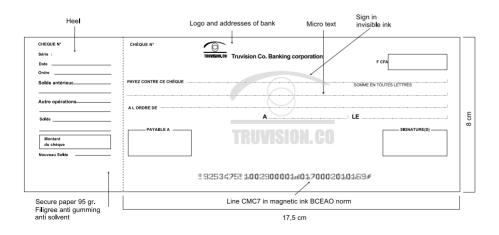

The reform of the payment and regulation under area of sub -Saharan Africa (Cemac, WAMI, UEMOA) have led to the standardization of check forms for dematerialized compensation.

Truvision Co. knew to control the standards of these under-areas by respecting the charter of their specifications respective.

In-house solution

Solution for small capacity

It is a question of providing the bank of an autonomous unit and the virgin stock of check book precut for personalization and the clothes industry in these buildings.

FZA2155: customize and encode checks with police CMC7 or E13B Micr.

The advantages of the latter are:

- Personalize more than 75 checks/times.
- Allows to write to 12 lines for personalization (the account name/branch/account No./Check No.)
- Very low rejection

Solution for medium capacity

It is a question of providing the bank of a unit being composed of:

- A software of personalization Eyesmartcheck personalization
- -1 laser printer special micr
- -1 cutter for cutting
- -1 electrical stapler or semi-automatic bookbinder
- -It virgin stock of check book in board 3 or 4 labels

This unit makes it possible to make more than 400 check books/day

External solution

Estimating that the clothes industry, the personalization of the check books as of the credit cards are not theirs springs and by concern of concentrating on the core business, some banks resorted to the subcontracting of this task.

DRAFTING AND DOCUMENT PROTECTION

Drafting and document protection

Technical Characteristics

Basic aspects

Food of the batches of cheques or one by one

Food (80 documents)

Scanarisation in the two sides front view and sight of back for capturation

2 packages of storage to sort the treated documents (50 documents each one)

Packet of complete detecting storage

Treatment of the linear documents when the capturation of image is required

Adjustment of line CMC7 through the download of criteria of adjustment to the unit

Options

Reader MICR, CMC7 and E13B
OCR and ICR recognition with interpretation software
BARCODE recognition with software interpretation
Printing Endorsement, jet of left ink back, 3 print positions, manually
Seal, front view

Specifications of the documents

MICR Solutions

BP63 is an ideal printer for the banks, financial institutions, security management, where the impression of top quality and the security is necessary. For safety reasons and to avoid the fraud, only the stations of impression of IMPACT are used in combination with ribbons with ink of security different. The ink of security can be used in one or very of impression 8 of impact. BP65 takes a maximum of advantages of the stations technology available providing a powerful environment of production for pre-coding and personalization of the cheques or the documents of value...

BP63

Capacity of boring 15 sheets

Depth of introduction 80 * mm

Dimensions LxDxH 13.2x30x29 cm

Weight 6 kg Machine perforator of a text which is on a plate stamps interchangeable. Each plate can contain two texts different from a line or a text alone from two lines, for a maximum length of 60 mm.

The aircraft are equipped with a practical bearing plate with mobile squares for an easy positioning of the documents. It is important to specify if boring must be carried out in top or bottom of the sheet. The quantity of sheets which can be perforated in only once depends on the grammage of paper and the style used.

Chek protector

Model 310B

Large print speed with very precise translation, clear figure with special ink indelible, impossible to be falsified.

You can use it as computer and you can print several times several time.

CK310B

Model SXJ-910

On the manual cheques, the amount seized with the hand or typed can be constantly modified.

Embossing enables you to prevent this risk.

SXJ-910

Capacity of stamping 15 sheets

Depth of introduction 80 * mm

Diameter stamps 20 + 40 mm

Dimensions LxDxH 13.2 x 30 x 29 cm

Weight 6 kg

The dry franking machine, with manual operation, enables you to stamp to 15 sheets of paper at the same time.

The quantity of the sheets which can be treated in only one operation depends on the grammage of the paper and the diameter of the stamps.

The mould and the against-mould can have a diameter of 25 millimetres up to 40 millimetres.

For the assembly of the engraved stamps, we advise on which side the sheet will be carried out stamping. The machine is equipped with a practical bearing plate, with mobile squares, for an easy positioning of the documents.

Drafting and document protection

Technical Characteristics

Capacity of stamping 15 sheets

TRUVISION proposes to you the best system of marking and demounting of hot holograms. It makes safe your plastic documents, papers and cards.

Here our machine BDMI-H21B which is declined according to your needs manually or automatic, in sheet feeder or uninterrupted, for plastic documents or cards.

Product Description:

The hologram is a visual factor of identification of your documents. It is impossible to reproduce, irremovable and any attempt at fraud will be put in obviousness.

Two possibility are offered to you for the security of your documents: the transparent hologram and the metal hologram. In both cases the holograms are affixed hot (200°) and are applied by pressure of against part to the matrix by a verrin of a power of 1 ton.

Drafting and document protection

Our paper under A4 format or A5, present of the elements which protects it from any attempt from falsification; The matter with which this paper is manufactured is anti-copy. Any reproduction, that it is by photocopiers or scanner, will display the mention "illegal copying" on all the surface in a very clear way.

Invisible inks taking the shape of the logo and the name of the bank are in all the surface of paper, these inks are visible using a detector of counterfeit bills to UV.

We have provides this paper to several banks in Central Africa. It is used to protect certain very significant operations like the banking guarantees, the vouchers cash and other documents.

Truvision carries out and personalizes your documents and makes visible falsification by combining secure inks and paper media.

Different treatment of security Paper with filigree Ink UV Thermo-ink Hologram Hot gilding Embossing All our documents are ready to pass in any printer.

For the letters cheque you can print line MICR with one to thunder magnetic.

In particular for the letters checks certain customers choose the outsourcing and regularly address us (daily or monthly) the letters checks to be printed in encrypted files so that we print them.

Series SC1600 is the successor of very much used SC1500, a meter of general-purpose office of currency SCAN COIN. The 1600 SC offers single and of point. Technology to help you to fight against the counterfeits.

Detection of the counterfeit

The SC1600 equipped with single and revolutionary technology identifies the counterfeits. The machine uses for example recognition sophisticated of the magnetic ink, ultra-violet and infra-red in the recognition in order to check the authenticity of banknotes.

This counter of high-output tickets allows a flexible, fast and reliable treatment of banknotes and other documents such as the checks. Thanks to a choice 3 throughput speeds, the counter of ticket 8672 adapts automatically to the characteristics specific to the ticket, thus offering making a constant counting and it powerful in the case of treatment of large volumes of tickets.

Multiple features:

The detection of undesirable tickets according to height (SD) is present on all the counters of tickets 8672.

With its options of detection of counterfeit and 3 levels of totals, the counter of DeLaRue8672 tickets is adapted to all the types of treatment.

Kisan500Pro is a value counter and intelligent sorter of tickets which uses the technology of recognition of the image for sorting and to count the banknote bundles.

The operator does not need more to sort and direct the tickets before counting them what increases considerably the flow and the productivity of the treatment of the receipts.

With a system of authentification in conformity with the standards of the BCE and BEAC, this sorter of tickets a reliable and precise solution for the treatment of the tickets brings.

The cercleuses ones of tickets are machines intended to surround the tickets of a band paper. The conditioning of the tickets is done by 100 (Boot) or 1000 (Brick).

Our range the cercleuses ones of tickets:

Hooping in the direction height and/or width of the tickets (cross hooping).

Control of the temperature of sealing and the tension of the band of hooping by micro processor.

Function counting.

Position of the band of in-depth adjustable hooping. Band white paper plasticized from 25 to 40 mm of width. Length of the reels 130 meters.

Time of heating approximately 30 seconds Speed of hooping 2.5 seconds per bundle

CB25

Packer

Technical Characteristics

Power supply in Volts

Maximum power in kw 1.2

Dimensions of the products 340x230x130 mm

Dimensions maximum of work 380x250 mm

Maximum production in cycles x a 300

Dimensions of the equipment 930x550x580

Weight of the equipment 36/48

Dimensions maximum winds film 250x320

Principal options

Blade of téflonnée welding replacing the traditional wire of welding nickel-chromium

The small size of the range of Minipack machines.

It is appropriate for the productions of small and medium-size companies. Its small and its versatility are its best qualities as much as its great reliability, its performances and its low fuel consumption in energy. All the functions of the machine are displayed via a digital screen installed in frontage.

The functions of welding and retraction are controlled starting from an electronic control panel allowing 10 preestablished programs.

Support of reel increased for better performances and a greater autonomy.

Minima Mini Pack

DESTRUCTORS OF DOCUMENTS

Destructors of documents

Technical Characteristics

Security level (standard DIN66399)

Dimension h x L x D (in mm) 400 x 330 x 195

Capacity of sheet, A4 paper, 70g/m²

Capacity from sheet, A4 paper, 80 g/m²

Capacity of the receptacle 18 liters

Cutting width (in mm) 4 mm

Opening (in mm) 220 mm

Throughput speed in meters/second 0.03

Reception of waste in Receptacle

Alimentation, volts/hertz 230 volts/50 hertz

IDE//\L

The IDEAL SHREDCAT 8240 destructor of documents cuts fibre is a crusher of the individual type and a confidentiality of a security level 2 (out of cut fibre) ensures you and 4 (for the cross cut) according to standard DIN66399.

Available fibre crosses from there or cross, thanks to the IDEAL SHREDCAT 8240 destructor of documents your personal data and professional are by no means likely to be revealed or exploited.

Its opening of 220 mm ensures a capacity of destruction to 13 sheets (A4 70 g/m 2) at the same time without any possible stuffing. The block of cut of the IDEAL 8240 crusher accepts only paper. Its speed of cut of 0.03 meter second will not cause any noise because it does not exceed the 50 dB.

IDEAL SHREDCAT 8240

Security level (standard DIN66399) P-5

Dimension h x L x D (in mm) 600 x 410 x 240

Capacity of sheet, A4 paper, 70g/m² 11-13

Capacity from sheet, A4 paper, 80 g/m² 9-11

Capacity of the receptacle 25 liters

Cutting width (in mm) 2x15 mm

Opening (in mm)

220 mm

Throughput speed in meters/second 0.03

Reception of waste in Receptacle

SPS protection system of security

Shutter of security on the level of the opening Yes

Automatic return/Stop in the event of extra thickness Yes

Alimentation, volts/hertz 230 volts/50 hertz

IDE//\L

Our destructor of documents AL1 for a confidentiality of class. DESIGN & TECHNOLOGY: 2 in 1 for exclusive destructor AL1 with an elegant preparing any aluminium and panels personnalisables of high quality.

A single model cuts cross 2 X 15 mm, equipped with a system of compaction with the particles and impeccable emptying of the receptacle $\frac{1}{2}$

IDEAL SHREDCAT

Power

2200 Watts (polyphase)

Noise level without paper

54 dB

Capacity of the receptacle

230 liters

Dimensions

1700*740*765 mm

Weight

256 kg

IDE//_L

Destructor with the design compact, entirely accessible by the front one, perfectly adapted for the centralized protection of information of a stage. Their powerful polyphase motor of 2.2 kw makes it possible to destroy to 130 sheets in only one passage! For ruffled papers coming from the baskets, a funnel is located above block of cut. One second opening with folding table of food makes it possible to destroy papers flat.

- Block of cut accepting staples and trombones
- Block of cut accepting the plasticized cards(CB...)
- Block of cut accepting CDs
- Block of cut accepting the diskettes

IDEAL 4605 C/C

Security level (DIN66399) H-3

Formats accepted hard drives 3.5 and 2.5 inches

Cycle of destruction 15 seconds (by hard drive)

Power supply (or on request) 230 V / 50 Hz / 1~ / 640 Watt

Dimensions H 850 x L 495 x D 470 mm

Weight 63 kg

IDE//\L

Of a simple pressure on a key, destructor IDEAL0101 HDP makes the hard drives worn unusable, and avoids the reconstitution of the data thanks to the hole bored by a punch.

The punching of hard drive 2.5" and 3.5" causes to destroy the mechanical part as well as the electronic parts which will be unusable.

Destruction of hard drives

IDEAL 0101-HDP

ENVELOPING MACHINE

The computer-assisted management of documents is essential with a treatment of mail succeeds

Productivity

Up to 900 folds/hour

Modularity

1 or 2 station(s) automatic(s) A4 (according to option)

1 semi-automatic station dedicated A4

1 station inserts (according to configuration)

Carrying capacity

to 100 sheets A4/station (80g/m²)

to 100 envelopes

The DI200 automates all the stages of the preparation of the mail and avoids hours of tiresome tasks.

You can realize with speed of the mailing (offers, prospection, revivals...) and to increase their frequency and their volume.

Compact and of an accessible price, the DI200 has its place in each service. It is profitable even for some folds per day.

- 9 times faster than at the hand
- To 15 envelopes at the minute
- Confidentiality of the documents guaranteed
- Usable by all without formation

DI200

Enveloping machine

Technical Characteristics

Many feeders

3 stations

Speed (env./h)

> 3 000

Working memories

21

Carrying capacity of the documents to be folded 2×350

Carrying capacity of the inserts

Carrying capacity of the envelopes 300

Secure joining of the envelope over the entire length yes

Ergonomic coupling with the franking machines DM yes

The setting under fold DI380, for a rationalized approach of the mail.

It offers a new level of productivity adapted to your operations of treatment of the mail, while folding and by putting under fold the documents up to 25 times more quickly than at the hand. It makes it possible to your collaborators to concentrate on less constraining and more productive activities.

With capacities for treatment of more than 3000 envelopes per hour, the DI380 is nearly 25 times faster than a manual treatment. Such a productivity makes it possible to answer as soon as possible all the constraints inherent in the mail.

DI380

Feeders number

From 2 to 6 (according to the model)

Speed (approx./H)

Up to 4000 (according to the model)

Type of fold

Rolled fold, accordion, simple, double fold

Dimensions

L = 1370 mm; D = 570 mm; H = 760 mm

The ideal compromise between obstruction, performances and ease of use;

the DI500 and DI600 make it possible to combine operations of current managements (invoices, pays, contracts...) and of the operations of direct marketing (mailing...) They guarantee visibility and important time-savers and of productivity to you.

To 4 chargers sheets (according to the model). The mode rocks, will make it possible to carry out the routings high volumes: when the first charger is empty, the setting under fold rocks on the following charger.

Stacker of envelopes motorized of high capacity. In option, a motorized reception increases the storage capacity of the envelopes with small overall dimensions. Moreover, the direction of the reception respects the direction of the edition.

DI500/DI600

SAFES AND CUPBOARDS

A protection surer of your documents and your bills

Protection against the theft - Tested by prestigious European standard EN1143-1 Standard Security.

Key locking - Team of a key lock with double breakdown your VDS Class 1 of high security, Euro Grade II. The trunks with one Euro Grade III are equipped with a key lock VDS Class II. Tested standard A2P.

Electronic locking: equipped with an electronic lock VDS Class 1 of high security (Secu A) with the function opening to temporization, Euro Grade II. The trunks with Euro Grade III are equipped with an electronic lock VDS Class II (secu B) with opening to temporization, multiple users, double control, and with reader tracks of audit.

Euro Grade I / II / III

Safes and cupboards

The Euroline Trunks are of excellent quality and modern design. The composite of shielding used in these trunks is one of most advanced market, that results in safes whose walls are relatively thin while keeping a reduced weight. These characteristics increase interior useful volume and reduce the costs of installation.

Resistance to the effraction Class 5

Insurable value class 5: 150000 €

Tested by VDS and certified by I>ECB.S in conformity with the European standard EN1143-1, Grade V

Construction multi walls of the body and the door filled of a composite high strength.

Locking three directions by massive steel bolts.

A bar of fixing on all the height of the door makes inoperative any attack on the pivots.

Lock and mechanism of locking are protected by additional shieldings and a device de re passive locking and credit (informers).

Equipped out of standard with a spanner lock double-ended web.

Euro Grade IV / V

Robur RSH2000 is intended for the storage of currency, banknotes and form during the work hours. The accessories in option get an effective system of storage. The 2 higher drawers are intended for the ranking of various banknotes.

The total height of the cupboard can be modified using the adjustable feet between 685 and 720 mm. A vat of sorting is delivered standard. The lower drawer communicates with the slit of the higher collector. The access to the drawer is possible by forming the pincode beforehand introduced.

To have a general sight of the whole of the drawers one can choose a unit of sorting (for currency and banknotes the vat has 9 compartments).

RSH 2000

SECURITY CUPBOARD S-93

Robur security cuboards is a solid construction welded in 4 mm laminated steel cold. The doors are of 4 mm out of steel, firmly committed on the four sides. Electronic Robur, the PIN of locking is integrated in the edge before the cupboard.

Using the keyboard, codes and times of time can be easily programmed.

Robur have now to develop in partnership with 3Si a dynamics new function of security. The system removing any hope insert with marking of DNA, provides a dissuasive effect with regard to treating hold up the attacks.

Compliance certificates of "ROBUR"

IT SOLUTIONS DEPARTMENT

Software Solutions

The impression of the bank checks is one of our main activities. TRUVISION CO. print the checks for zone WAMI normalizes WAMZ, for the countries of the CEMAC according to standard CORENOFI and for French-speaking Africa. Currently, TRUVISION CO holds more than 70% of the market of central Africa.

Regarding confidence as an invaluable asset reinforced with long, TRUVISION CO offers to its customers his expert testimony in the development of the modular and evolutionary software solutions adapted to your needs according to the activity which you wish to achieve (impression of the Cheques, solutions MICR, solutions CODBAR, solutions of Reading/Scannage de Chèques & Codbars, solutions of access of zone, etc...).

Our offer understands:

Repair and maintenance of equipment (Printers Laser MICR, Readers/Scanners of Cheques, etc)

Personalization of the Cheques and solutions MICR/CODBAR based on our range of software YASMINE.

Development of specific applications allowing to adapt the solutions to all and the trade branches of industry of the company of the customer.

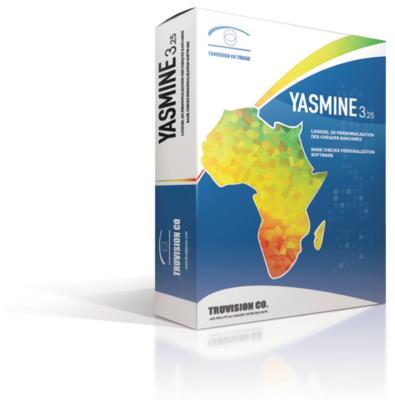

Using a rigorous methodology of quality and taking as a starting point the standard CMMI, TRUVISION CO. adopt the following phases in the management of the software projects:

- 1. Specification of the needs and analyzes functional
- 2. Definition of the architecture based on new technologies
- 3. Planning of the project and risk management
- 4. Modular and evolutionary concept
- 5. Development in accordance with the internal standards
- 6. Test and validation
- 7. Maintenance and Customer support

Based on a solid equips R & D which ensures the control of best new technologies as well as the large known products, TRUVISION CO. provides to its customers: innovation, robustness and effectiveness with the best quality ratio/price.

Do you have an idea of a software which can improve the productivity of your company? Do not hesitate to contact us. Each request will be examined and you will be able to profit from gravitational offers.

IT solutions department

YASMINE... A range of products of personalization

- \bullet Cheque forms and derived according to all standards: Cemac, Wami, UEMOA and others, lines MICR : CMC7 & E13B
- All other documents: Tickets, receipts, deposit slips...
- Bar code: invoice, payment order (water, electricity, telephone...) and others.

Innovations of YASMINE

Version 3.25©2014 TRUVISION CO.

Rich Options of impression & mass mailing:

- By selection of criterion :
 - o Individual selection: date, order, bank, arrange and no of account
 - Combined selection (32 possible combinations)
- By filters: filterings individual and/or combined filtering
- By research on the Print preview

Electronic filing

• Personalized labels exported under several formats: Pdf, TEXT, rtf, CSV, EXCEL, HTML, MHT & IMAGES (Bmp, GIF, JPEG, Png, tiff, Emf, Wmf)

Advanced use of the Sorting, Filters & Groupings:

- Simple type and made up type
- Personalized type (custom): combination of relational operators with the usual switching functions and of the specific functions.

And integrity consistency checks of information:

- Control of the classification of the orders and their double importation
- Control on the banks, the agencies, and the customers with the importation of the orders
- Control on the removal of the banks, the agencies, the customers and the orders

The automatic creation of the cards:

The 3.2.5.3 version of YASMINE is equipped with an automatic Generator of information of the base files: Bank, Agencies and Customers functioning during the treatment of the file of importation (the ordering of personalization).

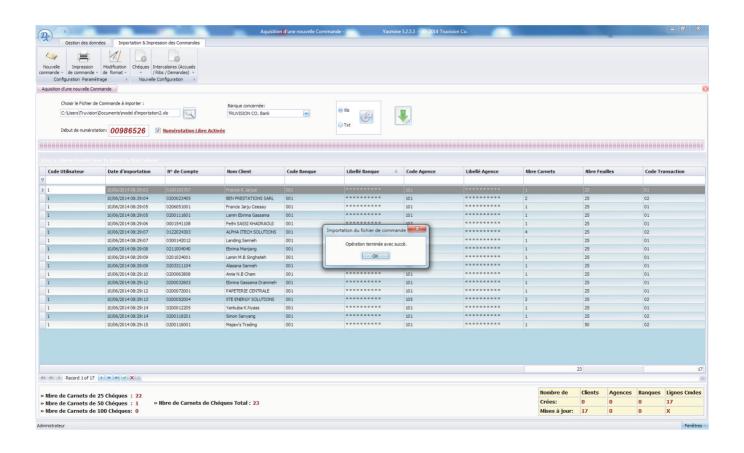

A fast visualization of the labels:

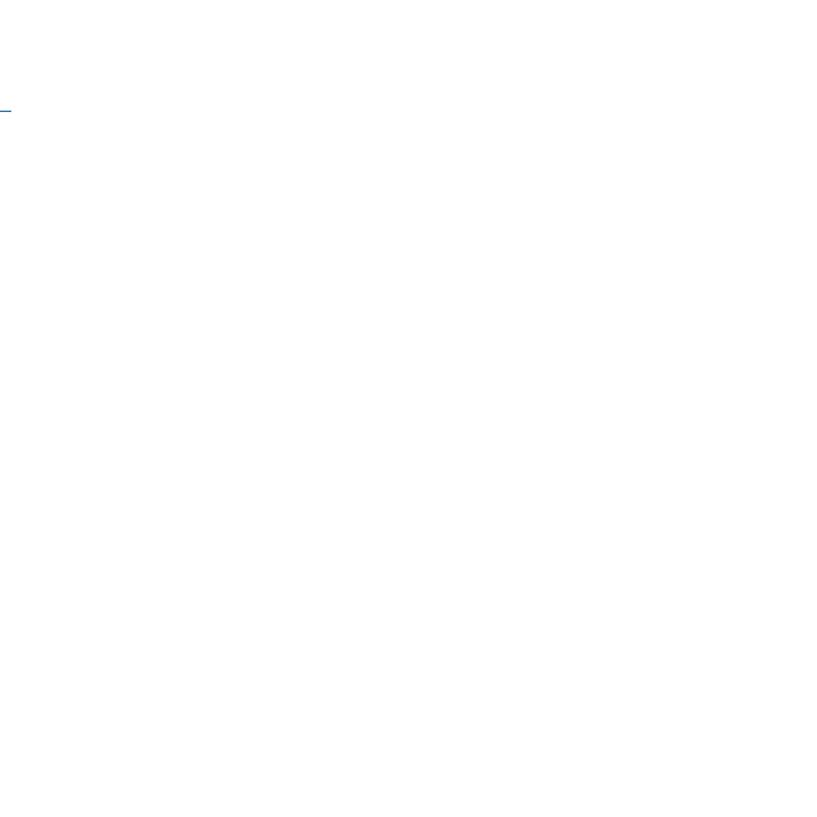

The 3.2.5.3 version of YASMINE is equipped with a drawing module of treatment of the visualization of the labels before the impression: visualization in Mode of impression per board of 04 of an order of 620 labels is practically done in 27 seconds.

A mechanism of automatic classification Hybrid to the choice:

- An in-house assured classification
- A classification ensured by series provided with the ordering of personalization
